
light (one point per fly)
dark / DD
median, 95% CI
sss: mean, 95% CI (median is 0: many flies have no qualifying transitions)
a
observable current c_{obs}
(P(Q before sleep) - P(Q after waking))
b
cycle flux J (cycles h^{-1})
(forward W→Q→S→W > 0)
c
entropy production (nats h^{-1})
count estimate, rule of three
